Cod: 4047

Drop-in Refrigerated Counter for Patisseries and Sandwich Shops, 142×80×135h cm

Description

Ristoattrezzature's **ultra-wide refrigerated display cabinet**, constructed from **AISI 304 stainless steel** with a white **Corian** finish, a white lacquered glass front and sliding plexiglass rear doors, is a display cabinet designed to meet the needs of cafés, patisseries, pizzerias, supermarkets, snack bars, sushi bars, self-service outlets and all those businesses that need to serve their customers cold deli products such as sandwiches, filled pastries, piadinas, pizza by the slice, rolls, ready-made salads, desserts, cakes, sushi and much more.

The **drop-in counter, featuring a display top** and upper shelf, is fitted with internal LED lighting to showcase the wide range of culinary offerings you wish to present to your customers and measures 142 cm in total. The serving temperature is adjustable between +2 and +8°C (refrigerant gas 404a) via a digital thermostat: this allows you to maintain a consistent and safe food storage environment. Furthermore, you can also order the hot/dry version of this unit, or a front panel in a different colour or an interchangeable one, via our online shop as an additional option for this versatile and fully customisable item.

What does 'Drop-in' mean?

The **refrigerated 'Drop-In'** is a built-in display unit designed to hold various trays for the optimal display and storage of products for sale. This new way of configuring the refrigerated display counter stems from the need to have the product at the same height as the worktop: this allows for perfect visibility of the food and, at the same time, optimises service and cleaning times.

Commissioning the refrigerated display cabinet

Before switching on the unit following delivery, we recommend leaving it switched off for at least 6 hours, then switching it on and waiting for it to reach the desired temperature; only then should you place the food inside.

What is Corian?

Corian is an advanced composite material, consisting of aluminium trihydrate and resin enriched with coloured pigments. It is solid and resistant to heat and impact, yet extremely malleable: it can be carved, milled or worked just like wood.

Key features

- Non-absorbent: it does not absorb liquids, so it can be easily cleaned with a damp cloth, a sponge and a mild detergent
- Environmentally friendly and hygienic: it is a non-porous material. It is compact throughout its thickness and can be installed with imperceptible joints, making the surface completely hygienic. Corian is therefore suitable for use in the kitchen and in contact with food
- Restorable: surfaces can be restored to their original appearance using a standard mild abrasive cleaner and an abrasive sponge
- Non-toxic: it is an inert and non-toxic material. When exposed to normal temperatures, it does not release any gases
- Invisible joints: it allows for invisible bonding and continuous surfaces with imperceptible joints, resulting in virtually endless design possibilities. Particularly long or corner worktops, for example, can be manufactured in a single piece
- Thermoformable: it can be manufactured with curved surfaces

What does refrigeration mean?

Refrigeration is a method of food preservation that involves keeping products at a low temperature without freezing the water contained within the food. To achieve this, food is kept at a temperature ranging between 0°C and 10°C. In addition to temperature, the storage environment must also be taken into account, particularly humidity: an unsuitable environment can lead to undesirable consequences such as: loss of the product's characteristics, the growth of harmful micro-organisms, wilting or browning. Keeping the interior of the appliances perfectly clean will ensure proper air circulation within the compartments or on the walls, which is essential for the appliances to function correctly.

Dimensions

Exhibition plan	1250x550 mm
Exhibition stand height	950 mm
External dimensions	1420x800x1350 mm
Packaging dimensions	1500x900x1500 mm
Shelf depth	250 mm
Shelf height	250 mm
Shelf thickness	380 mm

Technical specifications

Compressor power	1/2 hp
Electrical Power	0.7 kW
Net weight	190 kg
Operating temperature	+2 +8 °C
Power supply	Electric
Refrigerant gas	R404A
Voltage	230 V
Weight including packaging	200 kg
